I'm going to record what was discussed at yesterday's Ks rad sites meeting into my site logbook. It will be brief---"A meeting was convened at the EPA Region 7 offices with myself, Megan Brunkhorst, James Johnson, Mary Peterson, Chuck Hooper, Michael Beringer, and Denise Roberts in attendance. It was decided, based upon human-health risk, that we proceed with a fund-lead cleanup at the private property (920 S. St. Francis Street--Lou Guerrero and Teresa Guerrero) adjoining the Standard Products site. Beringer and Hooper will develop a brief risk determination for inclusion in the Action Memorandum. For the remainder of the site, future actions will await the analysis of a PRP search, which Roberts indicated should be completed in 1-3 months."

I suggest you two should do the same for your respective site logbooks. James, yours will be that it was decided to proceed with a removal assessment as the PRP search is initiated. Megan, future actions at the Standard Precision site will await the outcome of a PRP search.

Randy
